Summary

Full Stack Developer with hands-on experience building production CRM modules end-to-end using Next.js, TypeScript, and PostgreSQL/MongoDB. Comfortable owning a feature from API route to UI, with a focus on clean data wiring, reusable components, and shipping fast in an agile, fast-moving startup environment.

Technical Skills

Languages: JavaScript, TypeScript
Frontend: React.js, Next.js, Tailwind CSS
Backend: Node.js, Express.js, REST API Design
Databases & ORMs: PostgreSQL, MongoDB, Prisma, Mongoose, Redis
Tools & Platforms: Git, GitHub, Docker, OAuth

Experience

Full Stack Developer Remote
Arinova Studio *Nov 2025 – Present*

- Built and shipped **3 core CRM modules** (Student Management, Leads Management, User Management) end-to-end across a Next.js/TypeScript/Prisma stack, reducing manual data lookup time for counselors by an estimated **30+ requests** per business operation.
- Designed and integrated **8+ REST API routes** (GET/POST/PATCH/DELETE) for student, lead, and user data with search, multi-filter, and pagination support, cutting average list-load query time by streamlining server-side filtering logic.
- Engineered a **bulk lead-assignment API** enabling counselors to assign **50+ leads in a single action** instead of one-by-one, reducing per-batch assignment time from minutes to seconds.
- Diagnosed and fixed a critical backend relational bug in the Lead-Counselor join logic, preventing incorrect lead assignment across **100+** existing lead records.
- Redesigned the analytics dashboard with a **Composed Chart** visualizing leads/students over time and a redesigned KPI tile layout, improving at-a-glance reporting clarity for management review.
- Refactored shared UI shell components (header, tabs, detail sidebar) across **3+ modules**, cutting duplicate component code and standardizing the dark-mode theming system using Tailwind.
- Resolved a Next.js 16 App Router production build failure (missing Suspense boundary, chart container sizing) prior to deployment, preventing a failed production release.

Projects

SLIDS | *Student Immigration CRM* – Next.js, TypeScript, Prisma, PostgreSQL, Tailwind CSS

- Built a full-stack student management system with dynamic search, status filtering, and pagination over real production data, plus a slide-in detail sidebar covering contact, academic, and visa-pipeline information.
- Implemented role-based and branch-based user assignment workflows with modal-driven CRUD operations (create, edit, delete) backed by Zod schema validation and React Hook Form.

vsource | *Web Application* – Next.js, TypeScript, React

- Contributing to a production Next.js 16 App Router application, resolving build-blocking issues including Suspense boundary requirements and chart rendering bugs ahead of release.

Education

Manipal University India
Bachelor of Computer Applications (BCA) – Online/Distance *Expected 2027*
